Corporate Reputation and Competitiveness Rosa Chun 2005-09-29 This unique book written by four world leaders in reputation research, presents the latest cutting-edge thinking on organizational improvement. It covers media management, crisis management, the use of logos and other aspects of corporate identity, and argues the case for reputation management as a way of overseeing long-term organizational strategy. It presents a new approach to managing reputation, one that relies on surveying customers and employees on their view of the corporate character and in harmonizing the values of both. This approach has been trialed in a number of organizations and here the authors demonstrate how improving reputation, merely by learning more about what a company is already doing, is worth some five per cent sales growth. The book is a vital, up to date resource for specialists in corporate communication, public relations, marketing, HRM, and business strategy as well as for all senior management. Highly illustrated with over eighty diagrams and tables, it includes up to the minute illustrative case studies and interviews with leading authorities in the field. **Advanced Automotive Fault Diagnosis** Tom Denton 2006-08-14 Diagnostics, or fault finding, is a fundamental part of an automotive technician's work, and as automotive systems become increasingly complex there is a greater need for good diagnostic skills. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles National Research Council 2015-09-28 The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. **Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles** estimates the cost, potential efficiency improvements, and barriers to

commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.
